PART.1

# System Introduction

## ABOUT ECOSYSTEM:

The purpose of the **Online Bookstore Business System** is to provide customers a convenient online purchase of books, and the sale of second-hand books services, allowing customers to complete the purchase and sale of books without leaving their houses. In addition, publishers, printing plants, and express delivery companies provide online convenience support for the entry and exit of bookstore goods.

---

# Problem Statement

- How to quickly batch process idle old books?

This has always been a problem that bothers everyone. The time and energy cost for users to sell on the Internet one by one is too huge.

Throwing away old books directly will not only waste money but also damage the original value of the books.

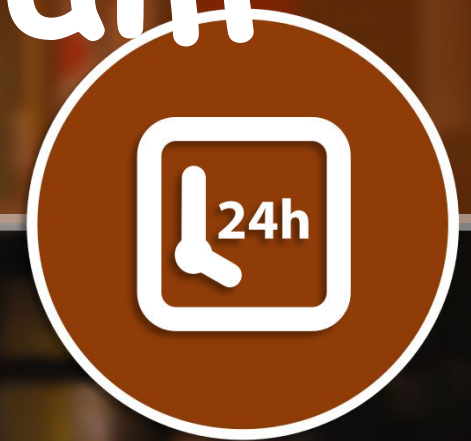

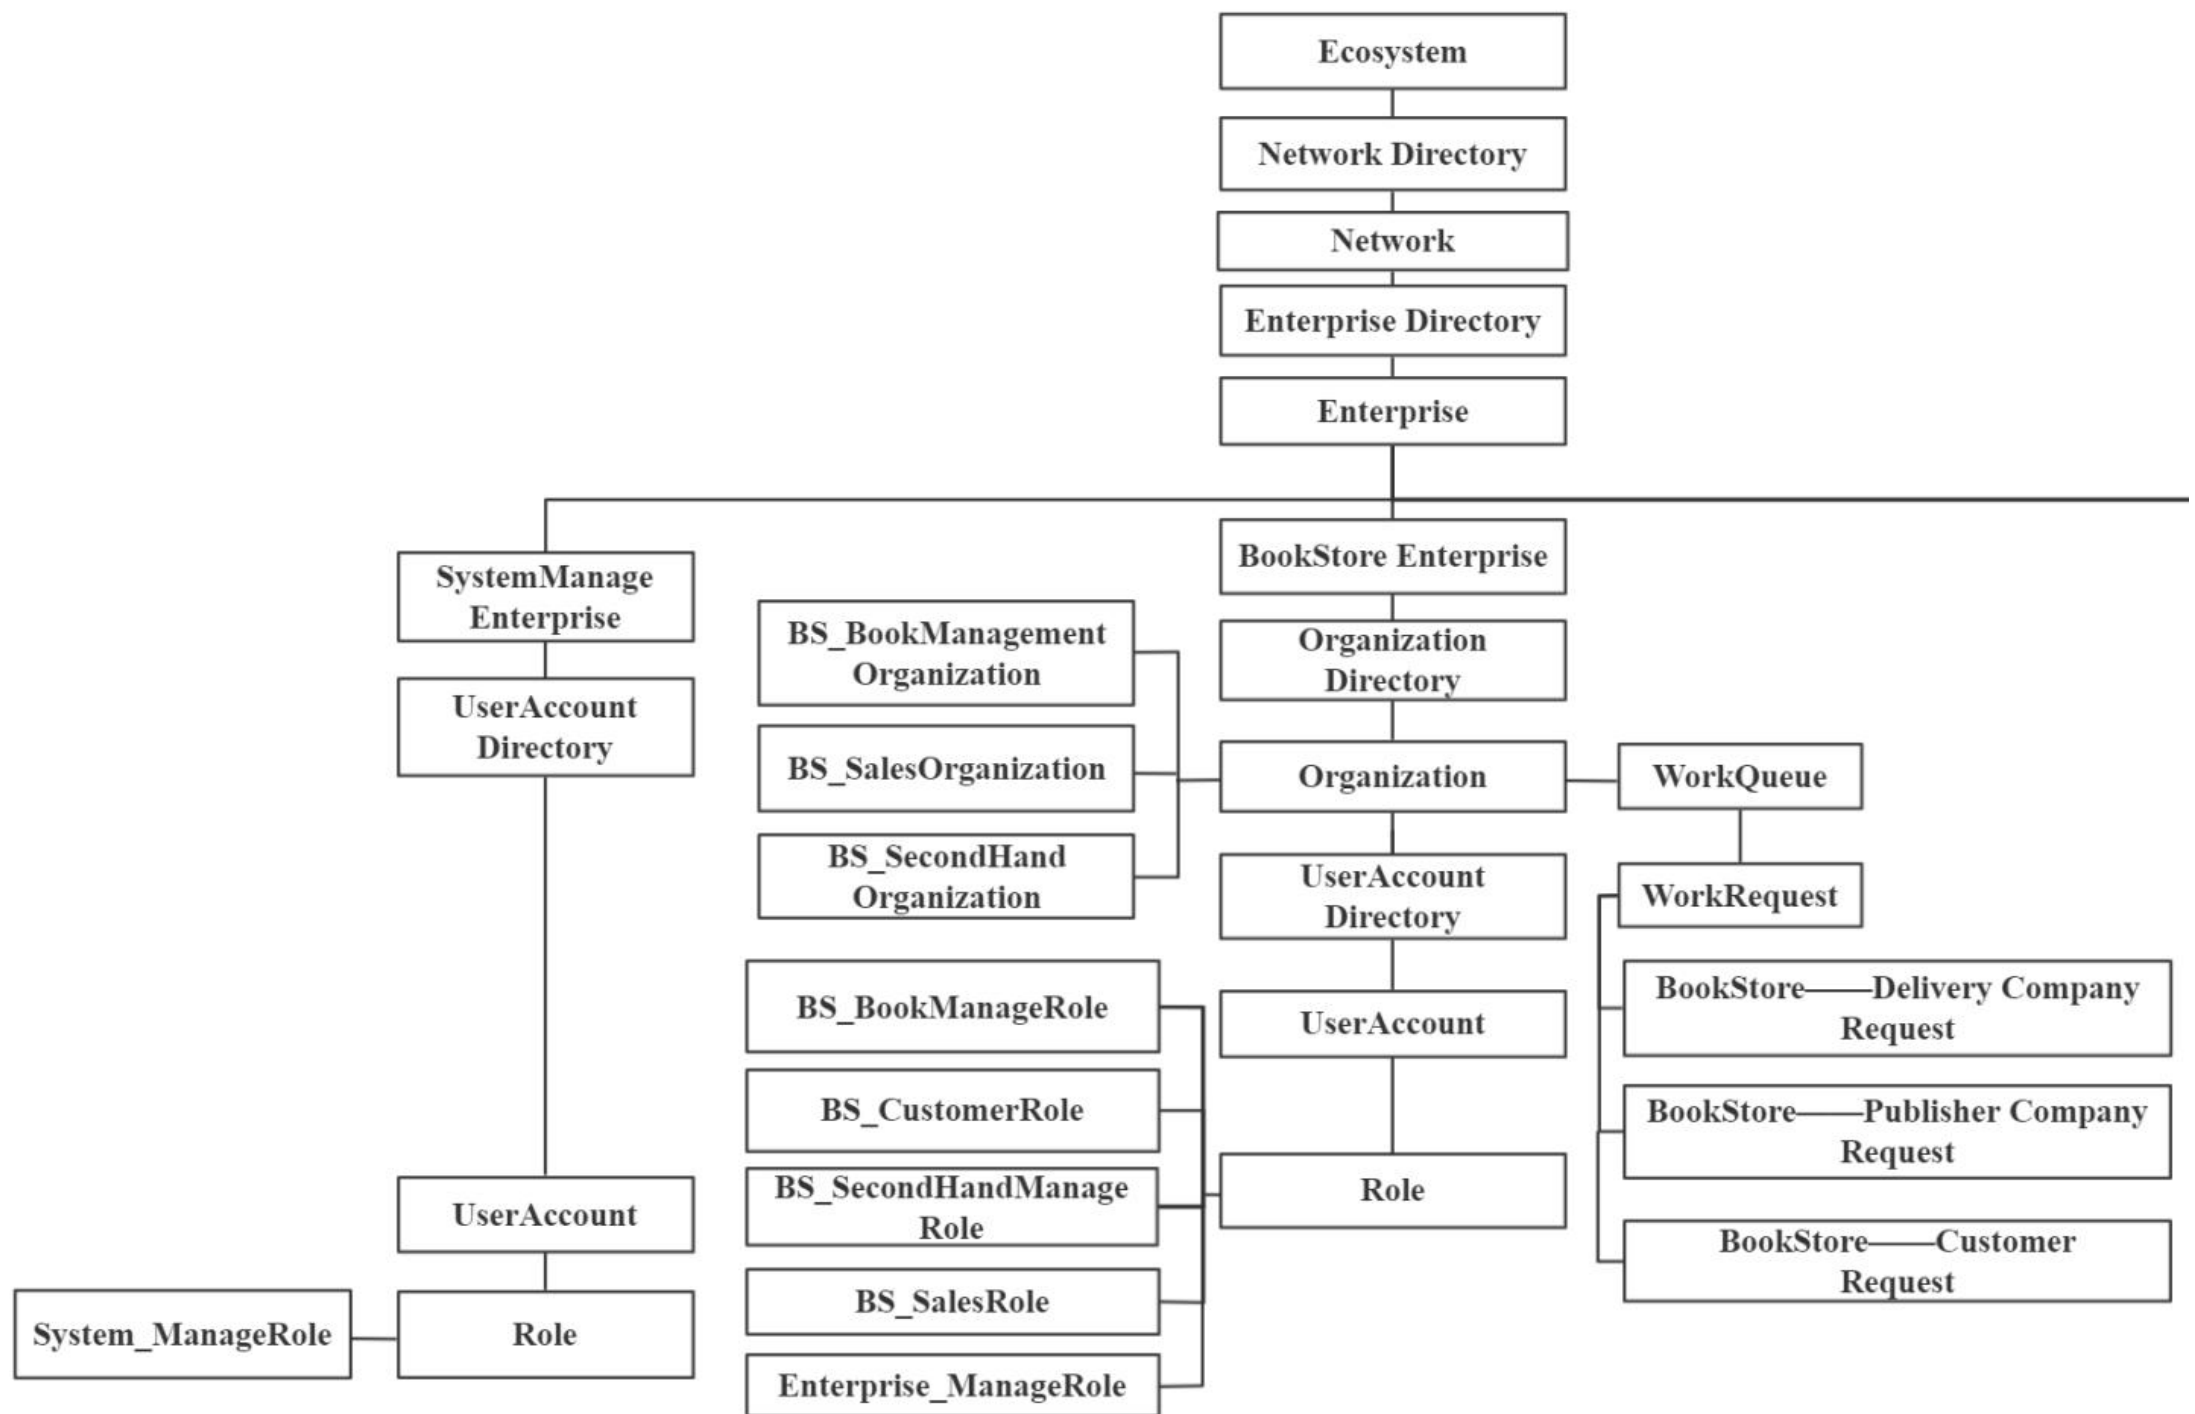

# Problem Statement

- By using **Online Bookstore Business System**, customers can sell second-hand books directly to the bookstore, and the bookstore can contact the delivery company to pick up the books, which greatly saves customers' time.
- In addition, customers can also purchase second-hand books online, so that books can be circulated to achieve sharing and environmental protection.
